

The incorporation of $^{241}\text{Am}/^{152}\text{Eu}$ during 2-line ferrihydrite alteration

Graham Kenyon

Research Centre for Radwaste Disposal and Williamson Research Centre, School of Earth and Environmental Sciences, The University of Manchester.

Figure 1. Presenting at the conference in front of over 200 academics.

I am grateful to the Mineralogical Society of Great Britain and Ireland for awarding me a travel bursary which enabled me to present my research at the 9th International Conference on Nuclear and Radiochemistry - NRC9 in Helsinki, Finland. Not only was I able to present my work, but I also had the opportunity to meet other researchers and to exchange ideas – the poster sessions at the conference were a great opportunity for this. Furthermore, the evening socials were great for meeting well established academics whose passion and dedication to the field of nuclear and radiochemistry is truly inspirational.

Figure 2. left, getting ideas from other researchers at the conference poster session. Right, meeting senior academic figures at a conference social gathering.
